USING THE SCREENLOGIC APP

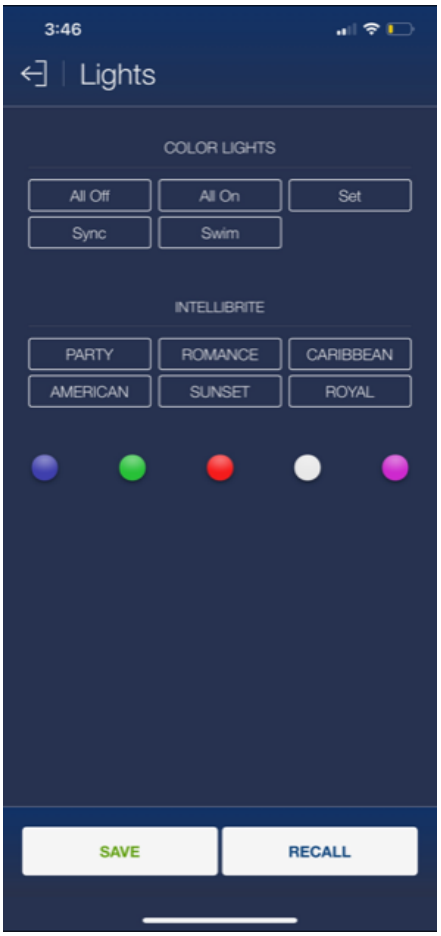

To operate the pool and the heating functions, open up the app titled **ScreenLogic**. Please note you will only need to use three functions: ***Pool, Spa and Lighting.***

To use the Spa Seating area as a hot tub, please ensure that the divider wall is inserted. You will then be operating the pool on spa mode, so you will be clicking on the second option down labeled '**Spa.**' Once you open the tab you will have the option to control your heat as well as the Spa jets.
If the divider wall is not in place and you are using the pool as a whole, you will be using the first option labeled '**Pool**' which puts the Modpool into pool mode. Once you open the tab you will see that you have the option to control your heat.

When you are finished using the Pool or Spa, please ensure that you click the button on the top to shut off the heating function, as circled below.

To activate the pool lights, click on the 'Lighting' option. From there you will be able to choose the color of your lighting or set it in some fun modes so it can cycle through different colors.

***Please be sure to shut the lights off when you are finished using the pool**.

If there are any technical issues with your Screenlogic App, please contact the creators of the app Pentair.
